To perform a silent installation:

Mandatory input parameter: SERVER_NAME - eg.: SERVER_NAME= "example.internal.jatheon.com"

C:\>msiexec /i JatheonOutlookAddInSetup.msi /quiet /lei install.log SERVER_NAME="example.internal.jatheon.com"

Optionary input parameter: with FOLDER_NAME - eg.: FOLDER_NAME="Archive Search"

C:\>msiexec /i JatheonOutlookAddInSetup.msi /quiet /lei install.log FOLDER_NAME="Archive Search" SERVER_NAME="example.internal.jatheon.com"

Optionary input parameter: with NOSSL - eg.: NOSSL="True"

C:\>msiexec /i JatheonOutlookAddInSetup.msi /quiet /lei install.log NOSSL="True" SERVER_NAME="example.internal.jatheon.com"

The output log is in install.log

Optionary input parameter: with ALLUSERS (install for all users on single machine) - eg.:

ALLUSERS=1 C:\>msiexec /i JatheonOutlookAddInSetup.msi /quiet /lei install.log

FOLDER_NAME="Archive Search" SERVER_NAME="example.internal.jatheon.com" ALLUSERS=1

To perform a silent uninstall:

C:\>msiexec /x JatheonOutlookAddInSetup.msi /quiet /lei uninstall.log

The output log is in uninstall.log

Notes:

msiexec.exe is a Windows system executable. It requires Admin privilege to run.

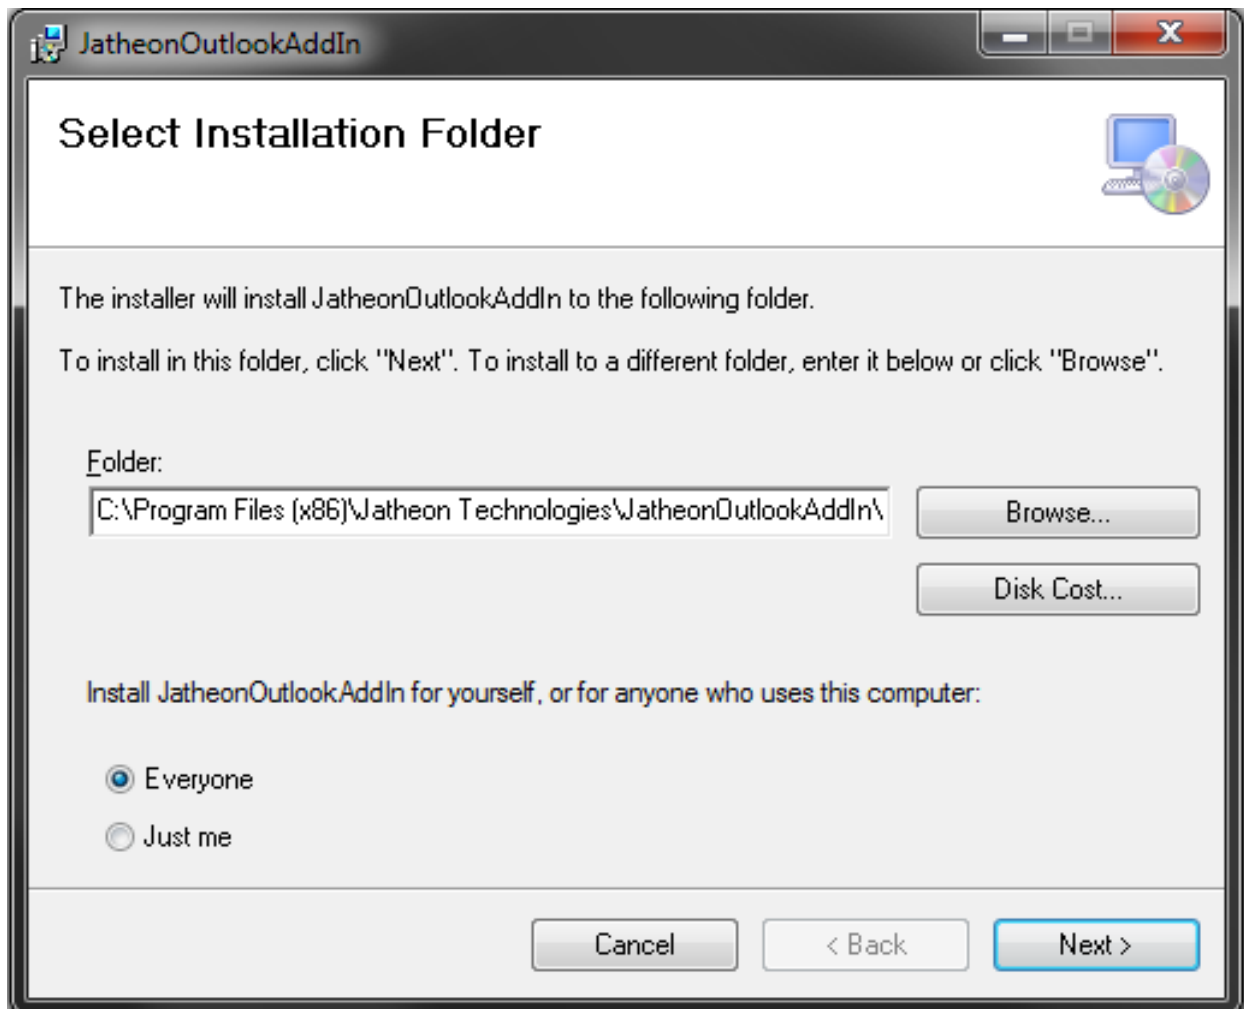

The UI installation for JatheonOutlookAddInSetup.msi is standard installation.

Instalation (UI)

Copyright warning / first step, just click next.

Then Select destination for plug in and whether all users can use it or just the user performing installation. Once done, click Next.

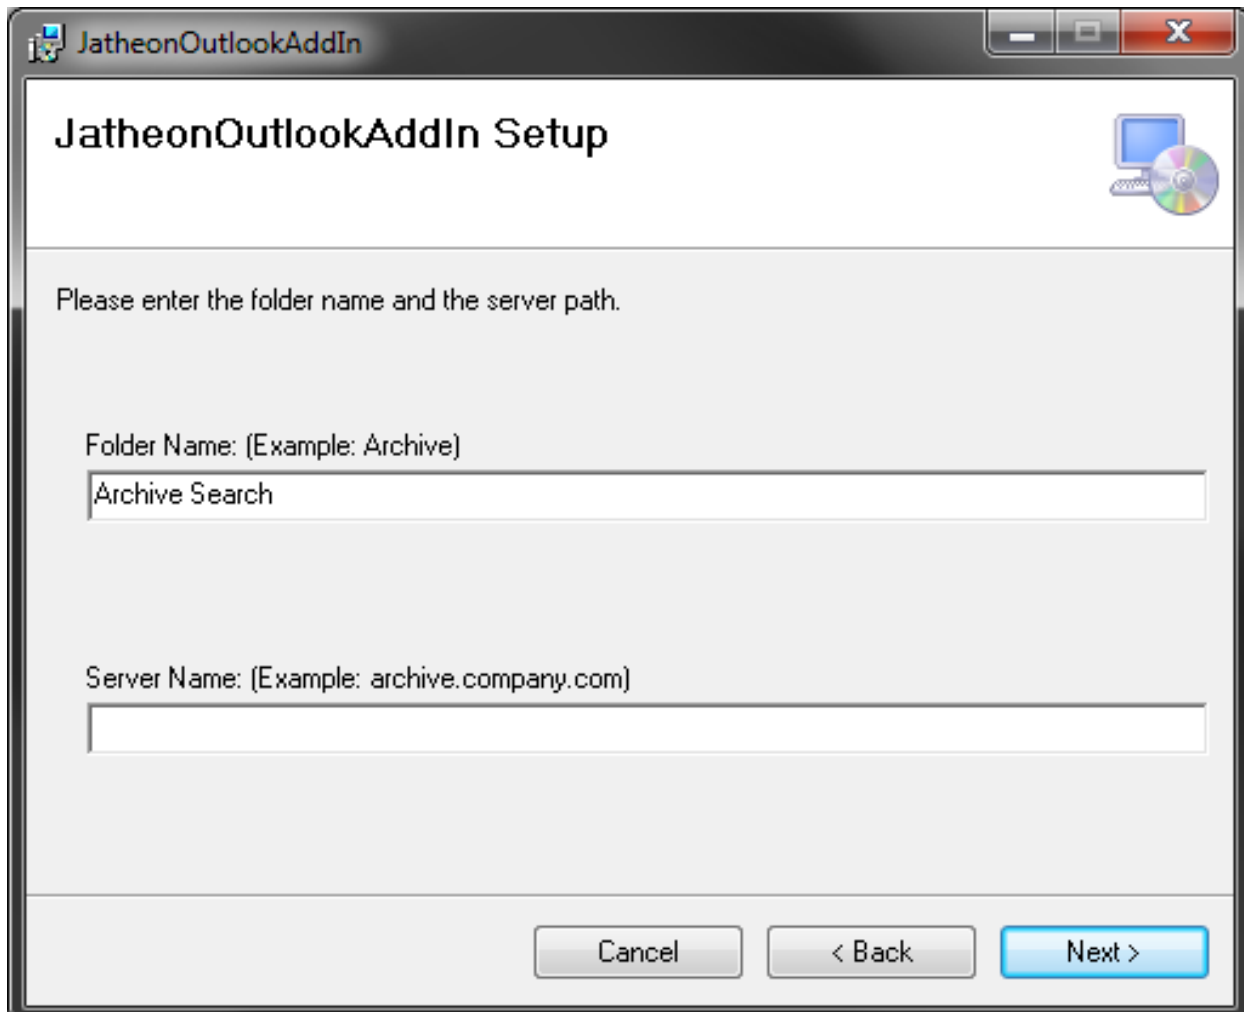

First text box will be the name of search result in your outlook, by default it is named Archive Search but you can name it what ever you prefer.

The server name is the base name, without the http(s) and without the path /rest.

So the Second text box for your server name lets give it an example

" https://example.internal.jatheon.com/#!/main " only enter " example.internal.jatheon.com "

JatheonOutlookAddIn Setup

Please enter the folder name and the server path.

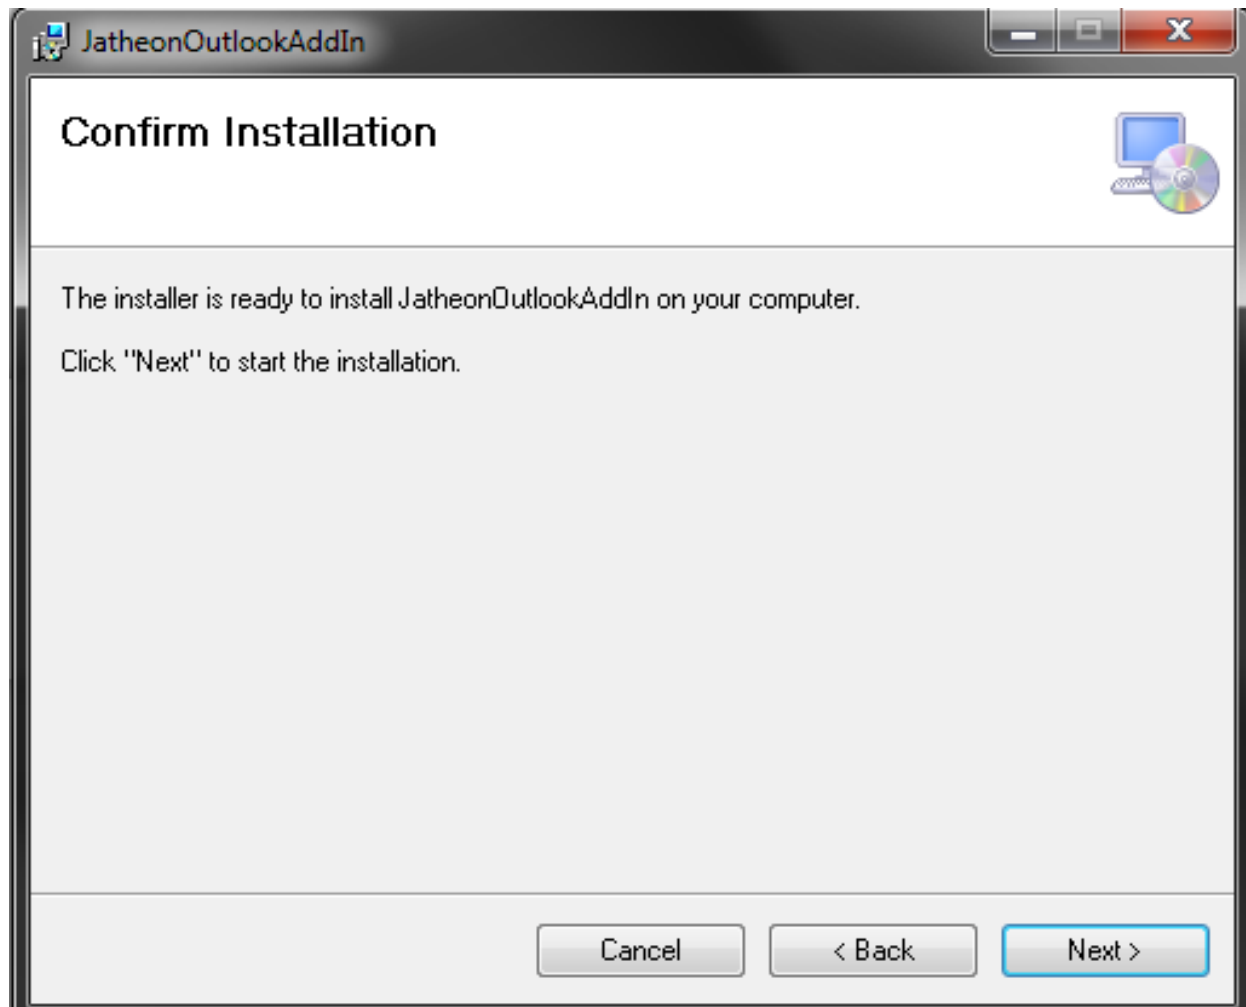

Folder Name: (Example: Archive)

Archive Search

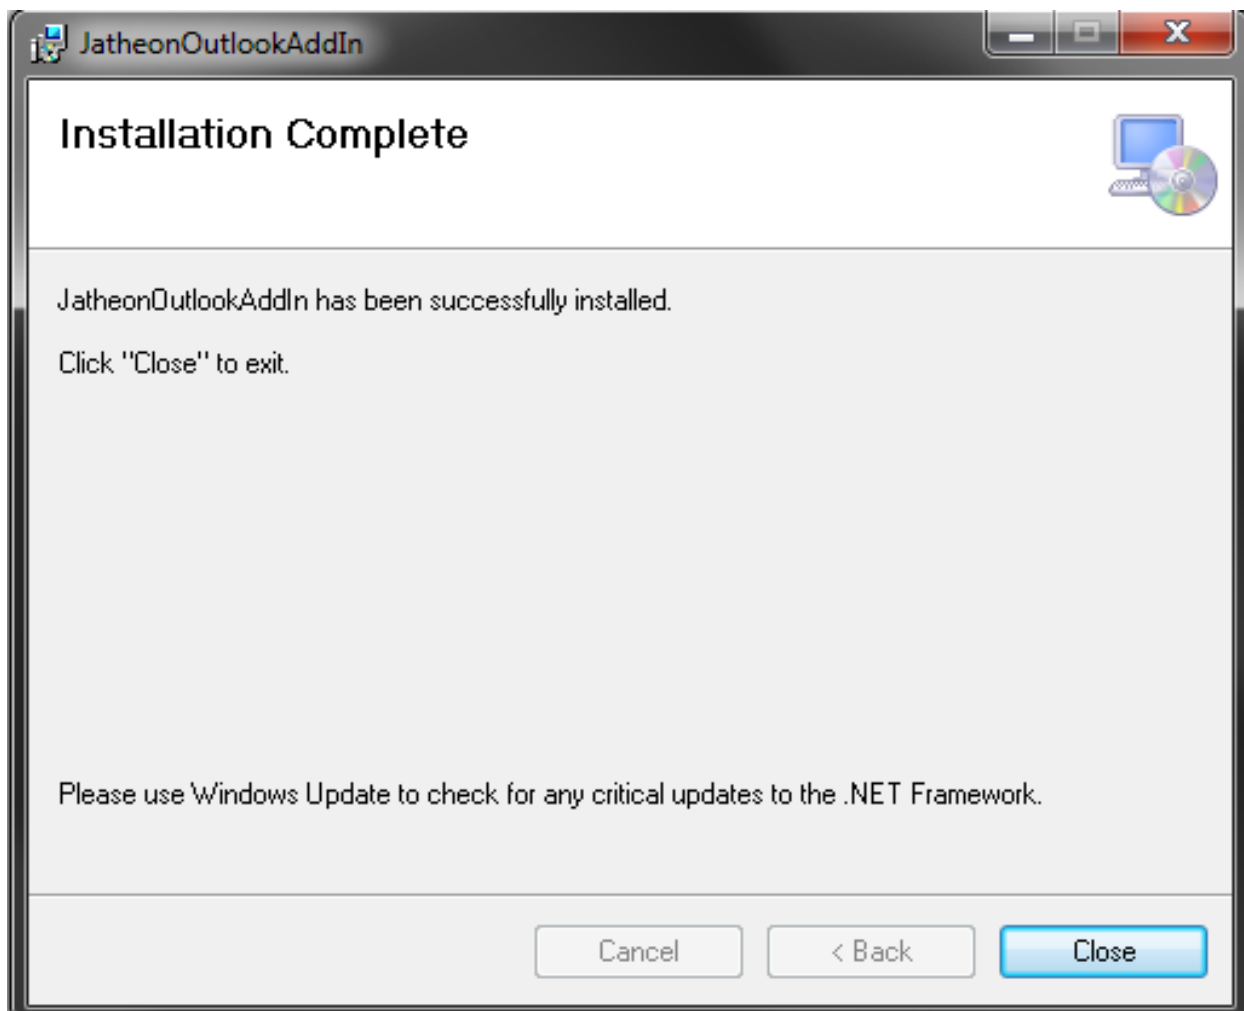

Server Name: (Example: archive.company.com)

Cancel < Back Next >

Click back if you want to make some changes, cancel if you want to abort the installation, or next if everything is done properly.

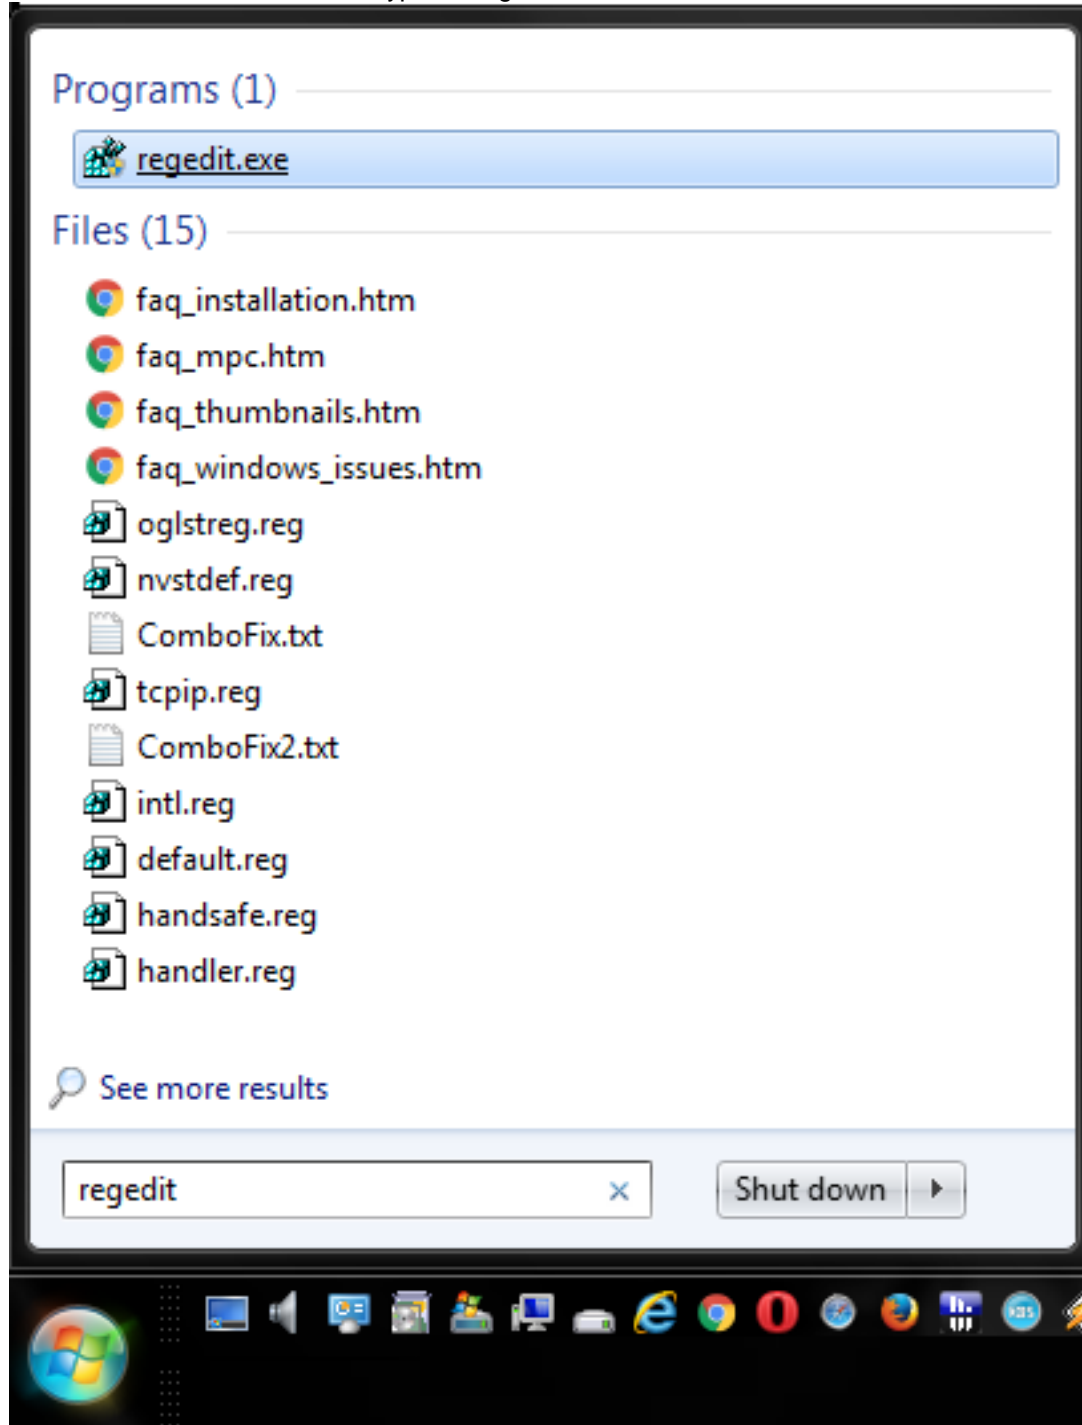

Once installation is done (usually does not take more than 10 seconds)
just click Close button and before you start using Jatheon Archive plugin make sure your NET framework
is updated.

EDIT of parameters after installation

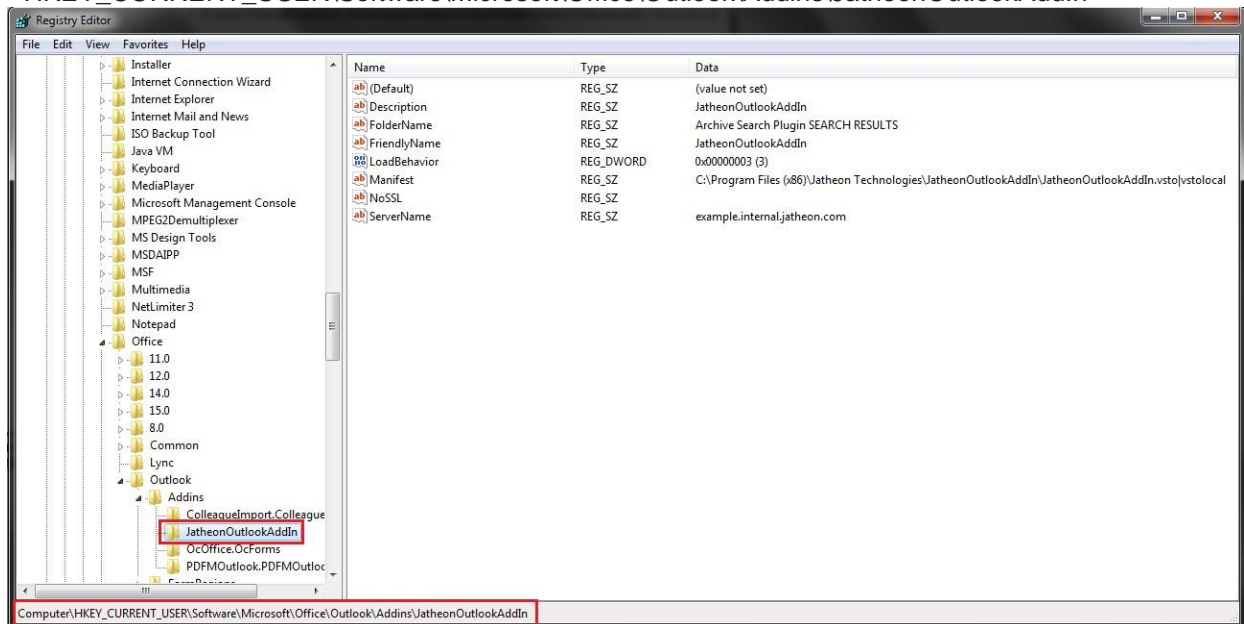

If you made some mistakes or if you simply want to make some changes to the configuration of Jattheon Ergo outlook plugin

Click on Start/Windows button, type in "regedit" and click on it.

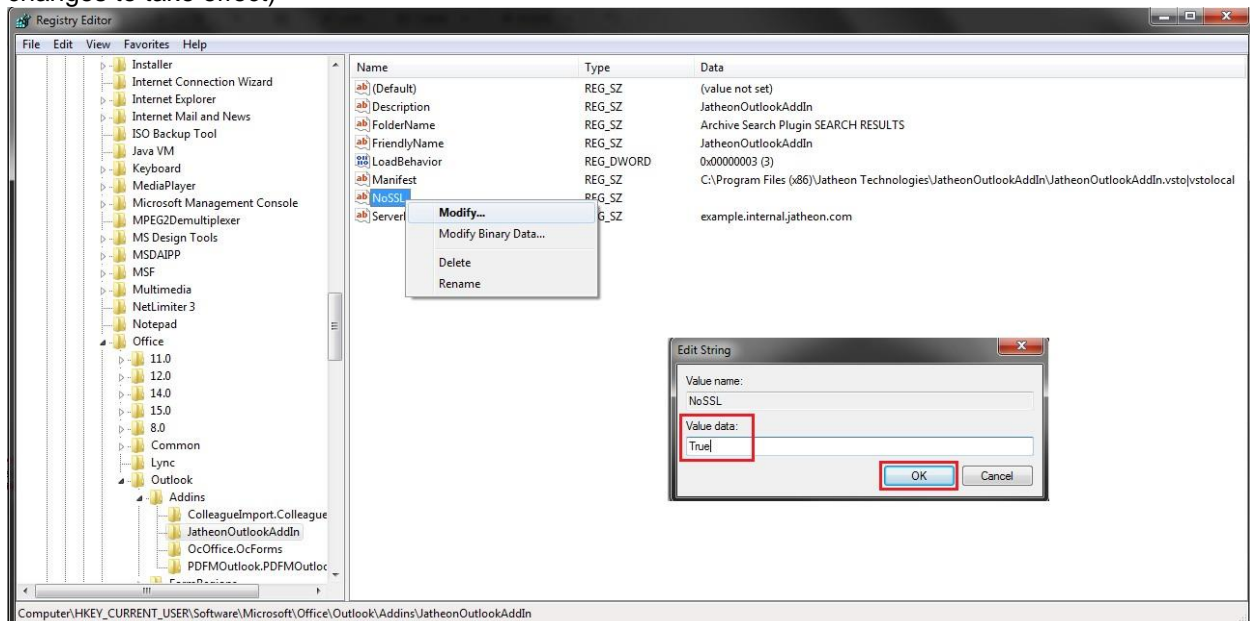

This is the full path you need to find

" HKEY_CURRENT_USER\Software\Microsoft\Office\Outlook\Addins\JatheonOutlookAddIn "

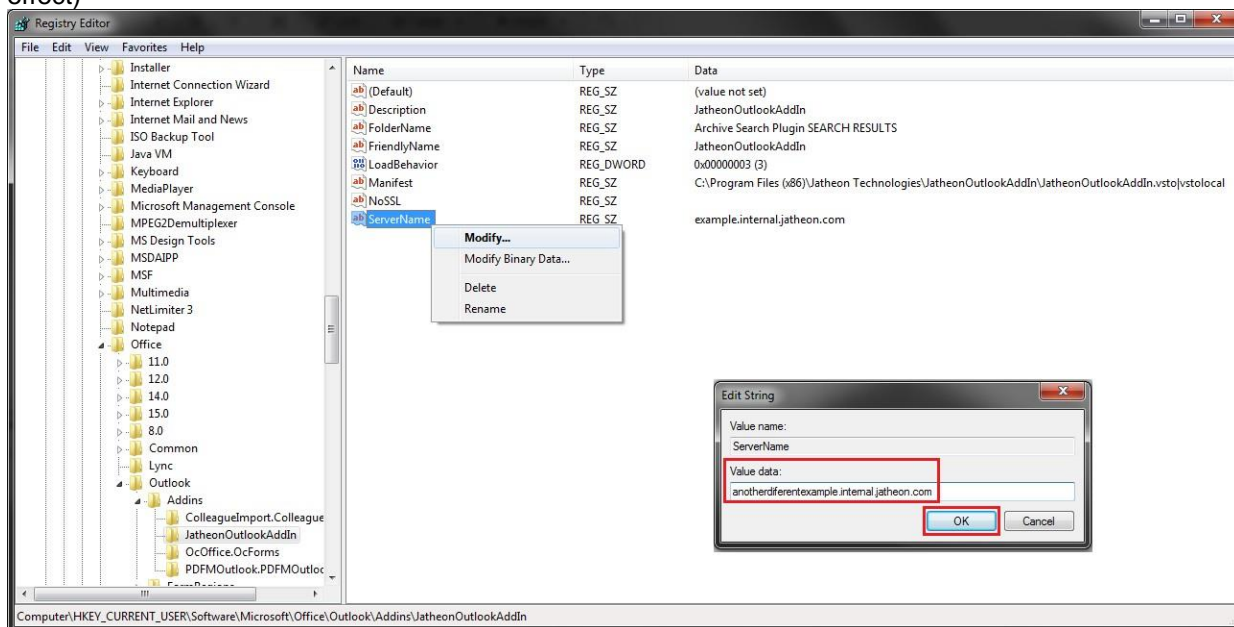

If you want to run plugin on non secure connection or you don't need certificate at all, look for a entry named " NoSSL " right click on it and select Modify

Than in value data enter " True " with capital T and click OK. (You need to restart outlook in order for the changes to take effect)

If you want to use it on a different URL or you made some mistake during the installation, right click on "ServerName" select modify
enter new URL in Value data and click OK (You need to restart outlook in order for the changes to take effect)

The first time when you start Microsoft Outlook there will be a user agreement window. Select I agree, if you agree, and click OK
